Finnstown, Lucan, Co. Dublin, K78 Y662, Ireland

Work Authorisation: Stamp 4

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 11 years in JavaScript and 6 years in React and TypeScript, with a strong focus on reusable component libraries, multi-brand theming, and accessibility. At Checkventory, owned front-end architecture end-to-end — building reusable UI components, implementing brand-based theming with design-token principles, and meeting WCAG accessibility standards. Experienced collaborating closely with designers, mentoring engineers, and advocating for consistent front-end standards across a team.

TECHNICAL SKILLS

Core: React, TypeScript, JavaScript (ES6+), reusable component architecture, Material UI, HTML5, CSS3, responsive design

Design System & Quality: Component-driven development, accessibility (WCAG/ARIA), theming & design tokens, Jest + React Testing Library, TDD/BDD

Tooling: Git, CI/CD (GitHub Actions), Figma, AI-assisted development (Claude — Opus & Sonnet, via Claude Code, the VS Code extension, and Claude Design), Sentry

Also: Redux, React Router, Node.js, REST APIs, Angular, PWA / offline-first (IndexedDB), on-device OCR (ONNX Runtime Web, Tesseract.js), camera capture, QR/barcode

WORK EXPERIENCE

Software Engineer | Checkventory, Ireland (Remote) *(Aug 2021 – July 2026)*

- Built and maintained reusable UI component libraries in React and TypeScript — establishing consistent patterns and upgrading React and Material UI across major versions, migrating deprecated APIs to reduce technical debt and improve maintainability.
- Built the controller-facing dashboard for an automotive asset-audit platform — data-grid views of audits and assets, asset and audit detail with field-captured vehicle photos, location mapping, and embedded reporting — giving controllers a clear view of audit progress and status.
- Implemented the field-to-review workflow: auditors capture vehicle photos in the field, controllers approve or reject each submission, and unsatisfactory captures are reissued for re-capture.
- Built a themeable component system supporting multiple organisations — centralising each brand's colours, typography, and spacing (design-token principles) so shared components adapted to each company's brand guidelines.
- Re-implemented complex data-grid components (sorting, filtering, pagination) when migrating from MUI DataGrid Pro to Material React Table, cutting licensing costs with no loss of functionality.
- Collaborated with designers, translating Figma designs and UX research into robust, reusable components.
- Reduced UI defect reports by 50% by centralising app state in Redux to eliminate inconsistent-state bugs, and using Sentry to trace and fix the highest-frequency production errors.
- Wrote Jest and React Testing Library tests for components and custom hooks — configuring the Jest toolchain and mocking browser-only dependencies (IndexedDB, WASM/OCR engines) — and ran tests as a pre-push check, growing coverage from 10% to 60%.
- Architected an offline-first progressive web app (React, TypeScript, IndexedDB) to capture asset identifiers and photos in the field with no connectivity, syncing on reconnect to a back-office interface for verification and reconciliation against expected inventory.
- Maintained and updated GitHub Actions CI/CD pipelines (YAML) for automated build and test workflows.
- Built an on-device scanning feature that captures a vehicle's identifier and photos from the camera instead of manual entry — running OCR client-side in the browser (ONNX Runtime Web / Tesseract.js) with image compression before inference, reducing input errors and search time.

Career Note*(Oct 2019 – Jul 2021)*

Job market impacted by COVID-19 following completion of M.Sc.; worked part-time in the security sector while actively pursuing engineering roles and keeping technical skills current.

Senior Developer / Team Lead | Jivox (now Da Vinci Commerce), India(Aug 2016 – Aug 2018)

- Led and mentored a team of 5 frontend developers across agile sprints, delivering 40 ad campaigns on schedule over 2 years.
- Owned the full project lifecycle — requirements, scoping, estimation, and delivery — improving on-time delivery rates.
- Built a MEAN stack ad test automation environment supporting 60+ client websites with zero style conflicts.
- Translated UX prototypes into performant, pixel-accurate interfaces aligned with business objectives.
- Ran QA reviews and team retrospectives, raising code quality and product standards sprint over sprint.

Widget Engineer | Jivox (now Da Vinci Commerce), India(Jul 2014 – Jul 2016)

- Developed custom widgets and single-page applications with React, Angular, Bootstrap, and Node.js for 30+ leading US brands including Toyota, Mazda, Maybelline, and Aveeno.
- Built and maintained a WebRTC stack with JavaScript-based video metrics tracking.
- Produced HTML5/CSS3/JavaScript ad creatives in a flash-free environment, improving customer engagement.

Associate UI Developer | Exilant Technologies, India(Aug 2012 – Jul 2014)

- Built accessible, standards-compliant UIs with HTML5, JavaScript, JSP, JQuery, and CSS3, optimising performance across multiple business domains.
- Partnered with UX teams to resolve issues rapidly and deliver pixel-accurate layouts under tight deadlines.

EDUCATION

M.Sc. Computer Science (Advanced Software Development) | Technological University Dublin(2018 – 2019)

- Dissertation: Measuring mental workload on JavaScript events.
- Built a responsive MEAN stack hotel booking application with REST API integration.

Bachelor of Engineering | KSIT, India(2009 – 2012)

Diploma in Computer Science | VET(2005 – 2008)

AWARDS

- Jivox MVP of the Year — November 2018
- Jivox 'Above and Beyond' Award — November 2016
